

RELEASE-COTE

is fast becoming the most popular releasing agent!

For releasing glue and other adhesives from hard to clean areas!

BRUSH-IT

Like water off a duck's back

Just a thin film of Release-Cote on any surface and it sheds glues, adhesives, plastics, coatings, inks, paints . . . like magic.

AEROSOL

What is Release-Cote

An inert releasing agent — a scientifically compounded preparation which prevents coatings such as glues, adhesives, paints, inks, plastics, varnishes, etc., from adhering to the walls of pots, ink fountains, spray booths, tanks, or any exposed surface. It is applied with rag or brush before filling your machine. At clean-up time, after reservoirs are drained, residue is removed by a simple stripping operation. No muss, no fuss, no bother.

Where to use Release-Cote

Release-Cote can be applied to spray booth walls, tanks, side scrapers and journals, ink fountains or any exposed surface where coating build-up occurs. Used in a machine's moving parts, it acts as a shield against splash or creep of coating materials onto areas where build-up will slow production or cause product "fouling".

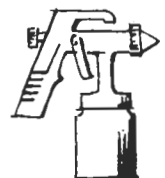

WIPE-IT

Thousands of Industrial Uses

In addition to being used to prevent unwanted glue, paint or varnish adhesion, Release-Cote has found thousands of new industrial applications including such unique uses as bowling-ball mold release, coating of knife blades used to cut pressure sensitive papers, and in printing press ink wells to facilitate clean up.

SPRAY-IT

Using **RELEASE-COTE** is . . . Like going to the bank — You Save every time you use it.

CLEAN-UP TIME

Is your adhesive clean-up time taking too long? Eating into your profits? Cut it in half with Release-Cote, the miracle releasing agent. Makes clean-up jobs simple, quick, pleasant. Apply a thin film of Release-Cote on a clean surface and coating materials such as glues, paints, varnishes and waxes strip off the walls of tanks, pots, journals, spray booths, and ink fountains in a jiffy at clean-up time.

MACHINE DOWNTIME

How do your operators clean their machines? Do they chop? Chisel? Scrape for hours? Just a thin film of Release-Cote on any surface and it sheds glue, adhesive, plastic coating, ink and paint like magic. Keeps machines running, eliminates the danger of costly build-up on exposed surfaces such as journals and scrapers. No need to stop machines to clean away build-ups. A little Release-Cote at the start of the day keeps machines running smoothly all day.

Save

MACHINE LIFE

Exposed surfaces treated with Release-Cote repel coating materials . . . eliminate the danger of taxing motors and moving parts impregnated with caked-up goo. Machines run at maximum efficiency all the time because they remain clean. Release-Cote can also be used on the machine's moving parts to act as a shield against splash or where coating materials climb onto journals, rollers, side scrapers.

Save

OPERATORS' TEMPERS

Many machine operators rub just a little Release-Cote on their hands prior to working with machines. Release-Cote prevents coating materials from sticking to the skin and nails. A quick rinse and the gooiest material washes off completely leaving the hands soft and clean.
